

Indoor Agriculture

Culpeper County is the ideal site for controlled environment agriculture. A combination of innovators, location and natural components have made Culpeper an ideal location for controlled environment agriculture.

Growing product is a by-right permitted industry in every zoning district in the county. This has allowed businesses to pick locations that make strategic sense for each operation. Greenhouses are located in the industrial park by the airport, near the historic district of Stevensburg, or along a US highway. Each has found success and we are starting to see next-gen growers moving completely under roof with automated operations.

**Culpeper County
has the largest
concentration of
Indoor Agriculture
in Virginia.**

Culpeper Advantages

Natural Quality

It's in the water. That's what they tell us. Our users have enhanced plant growth with our unique water composition, vital for success. Our growers use its natural benefits to support healthy plants. Test it, try it, and see your product thrive.
